Key Skills

Tech Stack Go, gRPC, REST/HTTP, PostgreSQL, Redis, Kafka, Docker, Camunda BPMN, MongoDB, Neo4j, Protocol Buffers, MinIO/S3, GitHub Actions, AWS, Kubernetes, testify, NixOS, Python.

Work Experience

MIDDLE GOLANG DEVELOPER *Bereke Bank*

Sep 2025 — Present

Auto Loan Issuance Team / Unified Credit Pipeline Team · production; high-load; event-driven; microservices

- Architect and build the company's **unified credit pipeline**, standardizing loan issuance across products and centralizing application routing and validation.
- Built numerous **production integrations** with government and financial services, including First Credit Bureau (FCB), collateral registries, and identity verification.
- Designed fault-tolerant microservice architecture with strict **latency SLA** and event-driven communication via Kafka.
- Previously: supported the launch of a large **auto-loan credit pipeline** from pilot to production scale — parallelized processing, **reduced loan issuance time from 40 to 15 minutes**, and grew volume from zero to **130 applications per day within six months**; built a corporate messenger alerting library.

Tech Stack Go, PostgreSQL, Redis, Kafka, Camunda BPMN, Docker, GraphQL, REST, CI/CD

JUNIOR GOLANG DEVELOPER *Ozon Tech*

Aug 2024 — Sep 2025

Enterprise Employee Portal (10000-15000 DAU / 40000+ MAU) · production; monolith → microservices

- Contributed to the design and decomposition of a large employee-portal monolith into microservices; optimized core load by 20–25% within my domain.
- Built **staff-lib** — internal Go SDK for DB access patterns, validation, and middleware — adopted as the standard across 30+ services.
- Developed automated **attendance management system** with intelligent seat reclamation and enforcement logic across 60000+ employees; platform sustained **2000 concurrent users** during Staff 2.0 launch peaks.
- Engineered an **ETL pipeline** from internal survey platform to Vertica, enabling self-service analytics for cross-functional teams.
- Designed **document generation infrastructure** with configurable templating engine for enterprise-wide corporate reporting.
- Delivered **video preview generation** service and backend optimizations for large-file processing in internal cloud storage service, including video assets up to **several TB per file**.

Tech Stack Go, gRPC, PostgreSQL, ClickHouse, Redis, Kafka, Vertica, Prometheus, Grafana

INTERN/JUNIOR GOLANG DEVELOPER *Ozon Tech*

Dec 2023 — Aug 2024

Ozon Matrix (Company-wide Hiring Platform) · production; microservices; high traffic

- Eliminated critical query bottlenecks in the hiring platform's candidate ranking — **significant speedup** on production SQL under peak load.
- Redesigned **ElasticSearch filter execution**: 2.5× throughput improvement and significant cluster load reduction through query restructuring.

- Designed and built a **gRPC notification microservice** for corporate messenger (Mattermost) with Kafka-based request sharding and configurable delayed dispatch — cut manager response time to candidate applications.
- Built **Grafana observability layer** for the hiring platform — proactive anomaly detection dashboards that reduced incident response time.

Tech Stack Go, PostgreSQL, Redis, ElasticSearch, Kafka, ClickHouse, gRPC, REST, Grafana

Education

B.SC. IN SOFTWARE ENGINEERING *Astana IT University (AITU), Astana*

2023 — 2025

PREVIOUS STUDIES *ITMO University, St. Petersburg*

2021 — 2023

- 2 years completed before transfer to AITU for Software Engineering.

Additional

Languages

- Full-time availability (on-site / hybrid / remote).
 - Seeking challenging backend engineering roles with growth opportunities.
- Russian — Native
 - English — C1 (Professional working proficiency)
 - Kazakh — Basic

Key Projects

CREATOR *AdalQarau — Public Procurement Analytics Platform*

2024 — Present

- Built **rule-based corruption risk detection** across 14.47 million contracts, 197 thousand buyers and 800 thousand suppliers using 8 indicator algorithms operating without labeled training data.
- System produced 448 thousand risk flags across all 20 regions of Kazakhstan; thresholds calibrated with government auditors; outputs used in real audit workflows by regional Accounts Committee offices.

Tech Stack Go, ConnectRPC, PostgreSQL, React, TypeScript, MinIO/S3, Docker, Protobuf
