

Roman Vassilchenko

Go Backend Engineer Astana, Kazakhstan · UTC+5

I build backend systems that accelerate critical business workflows and stay reliable under load, from credit pipelines at Bereke Bank to company-wide platforms at Ozon.

01 Experience

Bereke Bank

Sep 2025 · Present

Middle Golang Developer

Auto Loan Issuance / Unified Credit Pipeline · high load · event driven

- Architect and build the company's **unified credit pipeline**, standardizing loan issuance across products and centralizing application routing and validation.
- Built numerous **production integrations** with government and financial services, including First Credit Bureau, collateral registries and identity verification.
- Designed fault-tolerant microservice architecture with strict **latency SLA** and event-driven communication via Kafka.
- Supported the auto-loan pipeline from pilot to production: parallelized processing, made issuance **more than 2.5x faster**, from 40 to 15 minutes, and grew volume to **130 applications per day within six months**.
- Built a corporate messenger alerting library and operational notifications for production workflows.

/ Go / PostgreSQL / Redis / Kafka / Camunda BPMN / Docker / GraphQL / REST

Ozon Tech

Aug 2024 · Sep 2025

Junior/Middle Golang Developer

Employee platform · 10-15K DAU / 40K+ MAU · monolith to microservices

- Helped migrate a large employee-portal monolith to microservices and reduced **pod load by 20-25%** within my domain.
- Served as the **primary developer** reworking internal user-data storage, office-booking workflows and corporate messenger integrations.
- Actively maintained **internal Go libraries**: built shared DB, validation and middleware components used by **30+ services**.
- Developed an automated attendance-management system for **60K+ employees**; the platform sustained **2,000 concurrent users** during rollout peaks.
- Engineered an ETL pipeline to Vertica, document-generation infrastructure and large-file video-preview workflows for assets up to several TB.

/ Go / gRPC / PostgreSQL / ClickHouse / Redis / Kafka / Vertica / Grafana

Ozon Tech

Dec 2023 · Aug 2024

Intern/Junior Golang Developer

Company-wide hiring platform · microservices · high traffic

- Eliminated critical query bottlenecks in candidate ranking, delivering a **significant production SQL speedup** under peak load.
- Redesigned Elasticsearch filter execution, making search **3x faster** while significantly reducing cluster load.
- Designed a gRPC notification microservice for Mattermost with Kafka request sharding and configurable delayed dispatch.
- Built Grafana observability dashboards for proactive anomaly detection and faster incident response.

/ Go / PostgreSQL / Redis / Elasticsearch / Kafka / ClickHouse / gRPC / Grafana

SELECTED IMPACT

>2.5x faster auto-loan issuance
40 to 15 minutes

30+ services using shared libraries
Ozon internal Go platform

3x faster candidate search
lower Elasticsearch load

CREATOR · BACKEND ENGINEER

AdalQarau

Public procurement analytics platform

- Built rule-based corruption-risk detection across **15M+ contracts**, 197K buyers and 800K suppliers using eight indicator algorithms without labeled training data.
- Produced **448K risk flags** across all 20 regions of Kazakhstan; thresholds were calibrated with government auditors and used in real audit workflows.

/ Go / ConnectRPC / PostgreSQL / React / TypeScript / MinIO/S3 / Docker / Protobuf

PRODUCTION TOOLKIT

Backend

Go, gRPC, REST/HTTP, GraphQL, Protocol Buffers

Data

PostgreSQL, Redis, ClickHouse, Vertica, Elasticsearch, MinIO/S3

Distributed

Kafka, Camunda BPMN, microservices, event-driven systems

Operations

Docker, Kubernetes, Grafana, Prometheus, GitHub Actions, Linux

EDUCATION

B.Sc. Software Engineering

Astana IT University

2023 · 2025

Previous studies

ITMO University, St. Petersburg

2021 · 2023

Two years completed before transferring to AITU.

LANGUAGES

- Russian · Native
- English · C1 professional
- Kazakh · Basic

AVAILABILITY

- Full-time · office / hybrid / remote
- Ready to relocate
